Table of Contents

Table of Contents ii
List of Tables iv
List of Figures v
Acknowledgements vi
Chapter 1: Introduction 1
1.1 Historical perspective 1
1.2 Environment of discourse 2
1.3 What is congestion? 3
1.4 Congestion control 5
1.5 Fundamental requirements of a congestion control scheme 9
1.6 Fundamental assumptions 11
1.7 Previous Work 14
1.8 Scope of the thesis 18
Chapter 2: Fair Queueing 19
2.1 Introduction 19
2.2 Fair Queueing 20
2.3 Discussion 24
Chapter 3: Efficient Implementation of Fair Queueing 26
3.1 Introduction 26
3.2 The Fair Queueing algorithm 26
3.3 Components of a Fair Queueing server 26
3.4 Buffering alternatives 29
3.5 Performance evaluation 29
3.6 Conclusions 36
3.7 Future work 36
Appendix 3.A 37
Chapter 4: The Packet-Pair Flow Control Protocol 39
4.1 Introduction 39
4.2 Fair Queueing servers 39
4.3 Rate probing schemes 42
4.4 The Packet-pair scheme 43
4.5 Analysis 47
4.6 Conclusions 50
4.7 Appendix 4.A: Notation 52
Chapter 5: A Control-Theoretic Approach to Flow Control 53
5.1 Introduction 53
5.2 Stochastic model 53

5.3 Design strategy 54
5.4 System non-linearity 596
5.5 Kalman state estimation 60
5.6 Fuzzy estimation 62
5.7 Using additional information 66
5.8 Practical issues 67
5.9 Limitations of the control-theoretic approach 69
5.10 Related work and contributions 69
5.11 Future work 70
Appendix 5.A: Steady state 70
Appendix 5.B: LQG Optimal control 71
Chapter 6: Simulation Experiments 73
6.1 Introduction 73
6.2 Why simulation? 73
6.3 Decisions in the design of simulation experiments 73
6.4 Simulator 76
6.5 Flow and congestion control protocols 76
6.6 Simulation results 77
6.7 Conclusions 103
Chapter 7: Conclusions 105
7.1 Introduction 105
7.2 Summary of the thesis 105
7.3 Requirements re-examined 106
7.4 Comments on the design methodology 108
7.5 Contributions 108
7.6 Weaknesses and areas for future work 109
Bibliography 110

List of Tables

Table	Label	Page
3.1	Theoretical insertion costs	30
3.2	Implementation cost	35
4.1	Summary of analytic results	51
6.1	Alogrithm combinations	78
6.2	Scenario 1: Simulation results for FTP sources	80
6.3	Scenario 1: Simulation results for Telnet sources	80
6.4	Scenario 2: Simulation results for FTP sources	82
6.5	Scenario 2: Simulation results for Telnet sources	83
6.6	Scenario 3 simulation results	88
6.7	Scenario 4 simulation results	93
6.8	Scenario 5 simulation results	94
6.9	Scenario 6 simulation results	96
6.10	Scenario 7 simulation results	97
6.11	Scenario 8 simulation results	102

List of Figures

Figure	Label	Page
3.1	Round number computation	28
3.2	Simulation scenario	31
3.3	Stability of metrics	31
3.4	Simulation state space	31
3.5	Average cost results	32
3.6	Average and maximum cost results	33
3.7	Linked list performance	37
4.1	The packet-pair probing scheme	44
4.2	State diagram for implementing Packet-pair	46
5.1	Time scale of control	57
5.2	Definition of linguistic variables	64
5.3	Fuzzy prediction system	65
6.1	Example of simulation results	79
6.2	Scenario 1	79
6.3	Scenario 1: Utility diagram for generic flow control	81
6.4	Scenario 2	81
6.5	Scenario 2: Generic flow control: FCFS vs. FQ	84
6.6	Scenario 2: JK flow control: FCFS vs. FQ	85
6.7	Scenario 2: DEC flow control: DECbit vs. FQbit	86
6.8	Scenario 2: PP_CTH flow control	87
6.9	Scenario 3	87
6.10	Scenario 3: JK/FCFS window dynamics	89
6.11	Scenario 3: DEC/DEC window dynamics	90
6.12	Scenario 3: DEC/FQbit window dynamics	91
6.13	Scenario 3: PP/FQ 'window' dynamics	92
6.14	Scenario 4	92
6.15	Scenario 5	93
6.16	Scenario 6	95
6.17	Scenario 7	96
6.18	Scenario 7: JK/FCFS window vs. time	98
6.19	Scenario 7: JK/FQ window vs. time	99
6.20	Scenario 7: DEC/FQB window vs. time	100
6.21	Scenario 7: PP/FQ inter-ack spacing, inter-packet spacing and alpha	101
6.22	Scenario 7: Number of outstanding packets vs. time	103
6.23	Scenario 8	102

Acknowledgements

My first debt is to my advisor, Prof. Ferrari, who gave me a free hand with my research, and asked all the right questions. I have been greatly influenced by his tenet of bridging the gap between theory and practice, and have benefited from his detailed comments on every aspect of this thesis.

My other mentor is Scott Shenker, who introduced me to the area of congestion control. His style of research and emphasis on intellectual rigor will always be a guiding influence.

I would like to thank Sam Morgan, Chuck Kalmanek, Hemant Kanakia and Ellen Hahne at AT&T Bell Laboratories for providing a stimulating research environment during my visits, and to Sandy Fraser for the research funding that made much of this work possible.

Chapter 2, and a part of Chapter 6, present joint work with Scott Shenker and Alan Demers at Xerox PARC. I gratefully acknowledge their guidance and permission to use this work in the thesis. The use of deterministic analysis in Chapter 4 was motivated by work done by Prof. Samar Singh at the Indian Institute of Technology, Delhi, and Prof. Ashok Agrawala at the University of Maryland at College Park. They also independently invented the packet-pair probing technique. In Chapter 5, the use of a linear system model was suggested by G. Srinivasan. Pratap Khedkar gave valuable advice on the fuzzy controller. The helpful comments and criticism of Dr. R.P. Singh, Dr. Debasis Mitra, Prof. M. Tomizuka and Prof. P.P. Varaiya is much appreciated. The REAL simulator used in Chapter 6 is based on the NEST simulation package from Columbia University. My thanks to Alex Dupuy who helped me through some hairy debugging sessions, and to Steve McCanne who made several improvements and bug fixes to REAL.

Last, but not the least, my thanks to Dinesh Verma, on whom I could count for helpful criticism at a moments notice, and to my present and former colleagues, for their help, advice, and stimulating discussions: Anindo Banerjea, Ramon Caceres, Peter Danzig, Sally Floyd, Riccardo Gusella, Pratap Khedkar, Sharad Malik, Dave Presotto, Venkat Rangan, Stuart Sechrest, G. Srinivasan, Mark Sullivan, Shin-Yuan Tzou, Bernd Wolfinger and Hui Zhang,

Chapter 3 is being concurrently published as ``On the Efficient Implementation of Fair Queueing'' in the Journal of Internetworking: Research and Experience, and is reprinted by permission of John Wiley and Sons, Ltd.
